

# ReDREAM

change your energy

## THE CONSUMER MAKES THE DIFFERENCE

**Education**

I won the Weeks Challenge. I have reduced my electricity consumption by 10%.

**Flex Community**

My neighbour and I now use the electricity from his solar panels.

**Smart Technology**

I don't use my washing machine during the evening so its cheaper and more sustainable.

### Education

Informing consumers of the impact of their energy consumption behaviour is fundamental to facilitating a greater use of renewable energy so education is key.

### Flex Community

You will be able to share your experiences and knowledge, if you wish, with other like minded people in the community, particularly energy and money saved.

### Smart Technology

The project uses smart technology to support households to use energy more sustainably in an informed way.

## ReDREAM is an energy network

Together, participants will be able to bring about a significant change in the use of energy.

Throughout the project we will develop and refine our ecosystem and make ready for market. This is not an easy task – in addition to the fundamental research and analysis of consumer behaviour, numerous technical developments are needed. Programming, developing new algorithms and connecting suitable end-devices are just a few of the topics that the ReDREAM team will work on before 2023. However, it is not only the experts from the international consortium who are important. The ReDREAM International Consortium and Consumers are working in partnership to evidence how we can make our energy more efficient.

ReDREAM – Change your energy!
